Toorx BRX Recumbent 300

Featuring a magnetic braking system with a 32-level motrized resistance adjuster. The frame is made out of high-quality materials which can support a maximum user weight of 150 kg. Additionally, the seat can be adjusted horizontally for a comfortable training position.

Built into the hand grips are 2 wireless pulse receivers which measure your heart rate. The multicolor backlight LCD display displays your distance, time, calories, pulse, speed, RPM while working out.

Built-in Bluetooth intelligent system which enables your bike to fully interact with the most motivating Apps specifically suitable for bike training. Includes iConsole+ App with maps and

routes worldwide, fitness plan and workout record. Compatible with Kinomap (subscription not included).

Key Features:

- 14 kg flywheel system
- APP READY
- Heart Rate Control

Benefits Of The Product:

Cycling is an excellent way to get your heart pumping. Cardiovascular or aerobic workouts, such as cycling, strengthen your heart, lungs, and muscles. They also improve the flow of blood and oxygen throughout your body. This, in turn, can benefit your health in a number of ways, including: improved memory, lower blood pressure, improved blood sugar levels, lower stress levels and much more.

A stationary bike workout is a low-impact workout that uses smooth movements to strengthen bones and joints without putting much pressure on them. This makes it a good workout option for people with joint issues or injuries.

Your ankles, knees, hips, and other joints can be put under a lot of stress when running, jogging, jumping, or doing other high-impact aerobic exercises.

Because your feet don't lift off the pedals with a stationary bike, this option is kinder to your joints, but it still provides a challenging and effective workout.
