Toorx SRX-45S

This racing exercise bike has long life flet brakes and a brake lever for emergency stop. The bike its-self is made out of high-density steel which can support a maximum user weight of 125 kg. The console has an LCD display which shows you your distance, time, calories, speed and scan.

Adjustability is an important feature when it comes to excercise bikes. The seat position can be adjusted vertically and horizontally from 70 cm to 89 cm. Also the handlebar is a vertically adjustable from 92.5 cm to 104 cm.

Tranportation wheels are also built into the frame which make tranporting the bike much easier.

Key Features:

- Manual micrometric resistance adjustment
- Adjustable seat and handle bar
- Brake level for emergency stop
- Transport rollers

Benefits Of The Product:

Cycling is an excellent way to get your heart pumping. Cardiovascular or aerobic workouts, such as cycling, strengthen your heart, lungs, and muscles. They also improve the flow of blood and oxygen throughout your body. This, in turn, can benefit your health in a number of ways, including: improved memory, lower blood pressure, improved blood sugar levels, lower stress levels and much more.

A stationary bike workout is a low-impact workout that uses smooth movements to strengthen bones and joints without putting much pressure on them. This makes it a good workout option for people with joint issues or injuries.

Your ankles, knees, hips, and other joints can be put under a lot of stress when running, jogging, jumping, or doing other high-impact aerobic exercises.

Because your feet don't lift off the pedals with a stationary bike, this option is kinder to your joints, but it still provides a challenging and effective workout.
